EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Francesco Sardone on 8/26/09.

The application has been amended as follows:

- a. The abstract of the disclosure has been amended as follows:

Apparatus and method for applying fasteners during endoscopic surgery. The apparatus vertically stacks fasteners in a fastener applicator which is detachable and replaceable from a handle portion by a rotational locking system. The fasteners are applied by moving them to a driving channel by a biased fastener positioning spring as a slide is retracted; the slide is then advanced until it engages a fastener in the driving channel and drives the fastener over an anvil. During advancement of the slide a biased stop spring is forced back into a recess thereby allowing the next fastener to move forward in the storage channel; the slide is then retracted, freeing biased ejector springs to kick the formed fastener off the anvil; finally the slide is further retracted, until the fastener positioning spring is once again free to move the distal-most fastener from the storage channel into the driving channel.

- b. On page 2 of the Specification, under the title "Cross-Reference to Related Applications", after "Application Serial No. 09/851,211 filed on May 8, 2001" add "now

US PAT 6,652,538”; and after “Application Serial No. 09/113,827 filed on July 10, 1998” add “now US PAT 6,228,098”.

Allowable Subject Matter

2. The following is an examiner’s statement of reasons for allowance: The examiner has reviewed the USPN 4,523,707, issued to Blake, III et al, used to reject claims 31-33 and 35-50 in the previous office action mailed on 3/18/09. This reference teaches a surgical stapler, comprising a handle; a triggering mechanism; a plurality of vertically stacked fasteners; a fastener applicator including a first and a second half section, a pusher, a slide, a fastener positioning spring, and a stop spring. The rejection appears to be inappropriate because there are differences between the first and second half sections, the fastener positioning spring, and the stop spring taught by Blake and those disclosed in the instant application. The following explains the differences:

c. Upon assembly of the first and second half sections of Blake, a single recess is provided therebetween, whereas the first half section (50) of the instant invention includes a flat side (54) having a recessed region (70) formed therein configured to retain the fasteners arranged in a linear configuration and to slidably receive a pusher, and the second half section (100) of the instant invention includes a flat side (102) having a recessed portion (110) configured to slidably receive a slide therein.

d. More importantly, the instant invention discloses wherein a fastener positioning spring (60; fig. 9) is attached to and flush with the recessed region of the first half section, and is biased to extend beyond the recessed region and the flat side of said first half section (fig. 8); and wherein a stop spring (170; fig. 7) housed within the recessed

portion of the second half section, and biased to extend beyond the recessed portion of the second half section and into the recessed region of the first half section to engage and stop a fastener adjacent to a distal most fastener (fig. 8).

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
